## IAM Dashboard

Security recommendations 1

- Add MFA for root user  
Add MFA for root user - Enable multi-factor authentication (MFA) for the root user to improve security for this account. [Add MFA](#)
- Root user has no active access keys  
Using access keys attached to an IAM user instead of the root user improves security.

## Create user group

Name the group

User group name

Enter a meaningful name to identify this group.

Maximum 128 characters. Use alphanumeric and "+-.,@\_." characters.

Add users to the group - Optional (0)

An IAM user is an entity that you create in AWS to represent the person or application that uses it to interact with AWS.

<input type="checkbox"/>	<a href="#">rds-monitoring-role</a>	AWS Service: monitoring.rds

**Roles Anywhere Info**

Authenticate your non AWS workloads and securely provide access to AWS services.

**Access AWS from your non AWS workloads**

Operate your non AWS workloads using the same authentication and authorization strategy that you use within AWS.

**X.509 Standard**

Use your own existing PKI infrastructure or use [AWS Certificate Manager Private Certificate Authority](#) to authenticate identities.

**Temporary credentials**

Use temporary credentials with ease and benefit from the enhanced security they provide.
